

ATTACDET

REAL-TIME ANALYSIS OF WEB TRAFFIC WITH MACHINE LEARNING

Prepared : **Musa ŞANA**

Advisor : **Zeydin PALA**

Kullanılan Kütüphaneler / Teknolojiler

→ Scapy

Pythonın network seviyesinde işlemleri yapmamızı sağlayan en güçlü kütüphanesidir.

→ Tornado

Python ile geliştirilmiş asenkron çalışan bir web server frameworkdür. Özellikle real-time yapılmak istenen işlemlerde kullanılır.

→ Chartjs

HTML5 canvas elementini kullanarak birçok grafik formatı oluşturmamızı sağlayan javascript kütüphanesidir.

→ **Websocket**

Bir döküman/dataset içerisinde geçen kelimelerin önemini, istatistiksel yöntemlerle hesaplayarak bunları birer vektör haline getiren bir yaklaşımdır.

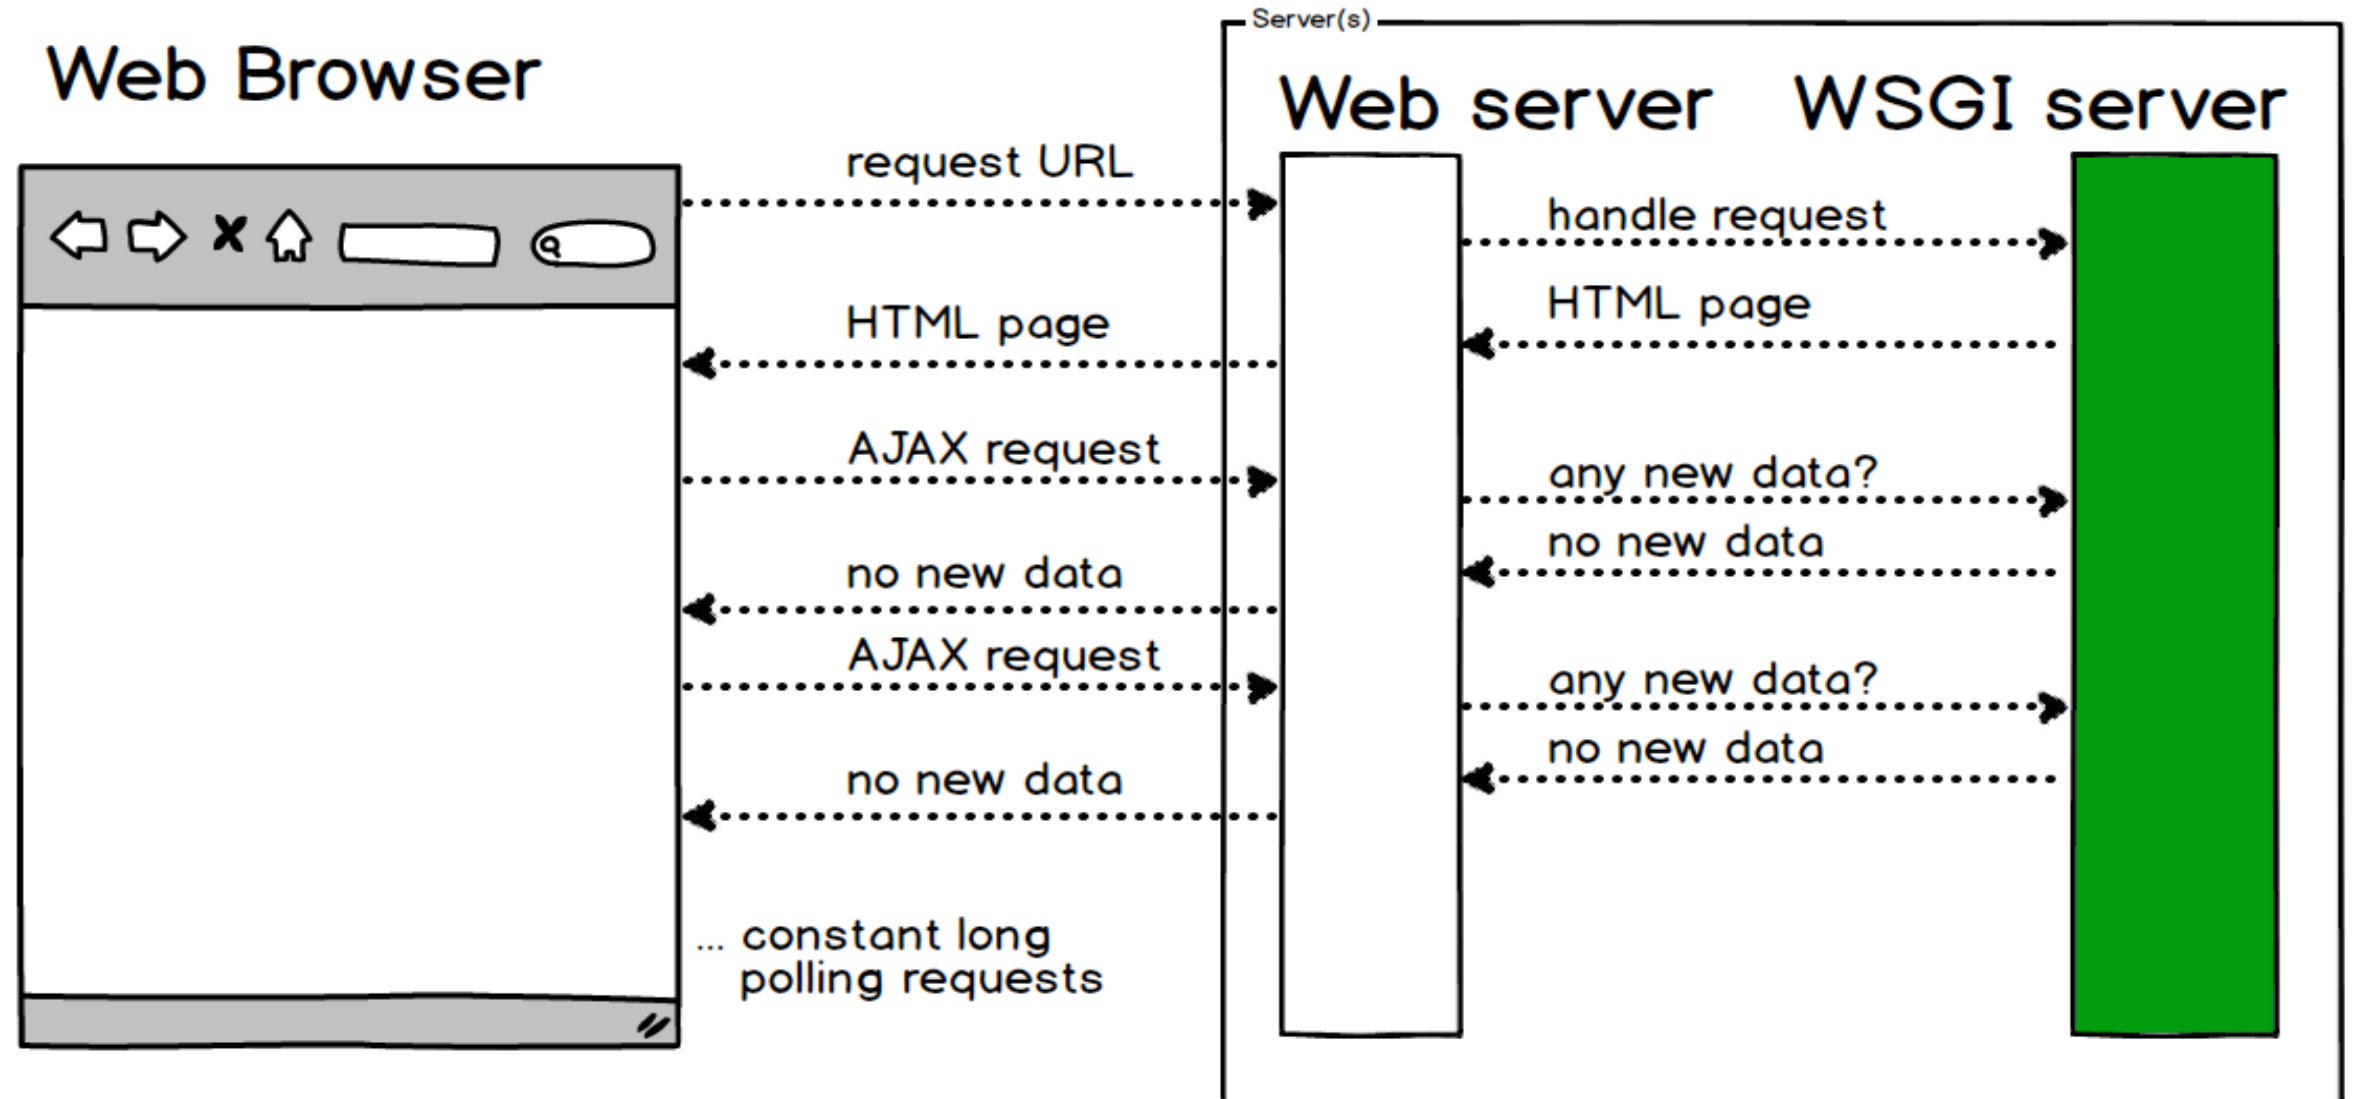

→ **Tf-idf (Term Frequency–inverse Document Frequency)**

Bir döküman/dataset içerisinde geçen kelimelerin önemini, istatistiksel yöntemlerle hesaplayarak bunları birer vektör haline getiren bir yaklaşımdır.

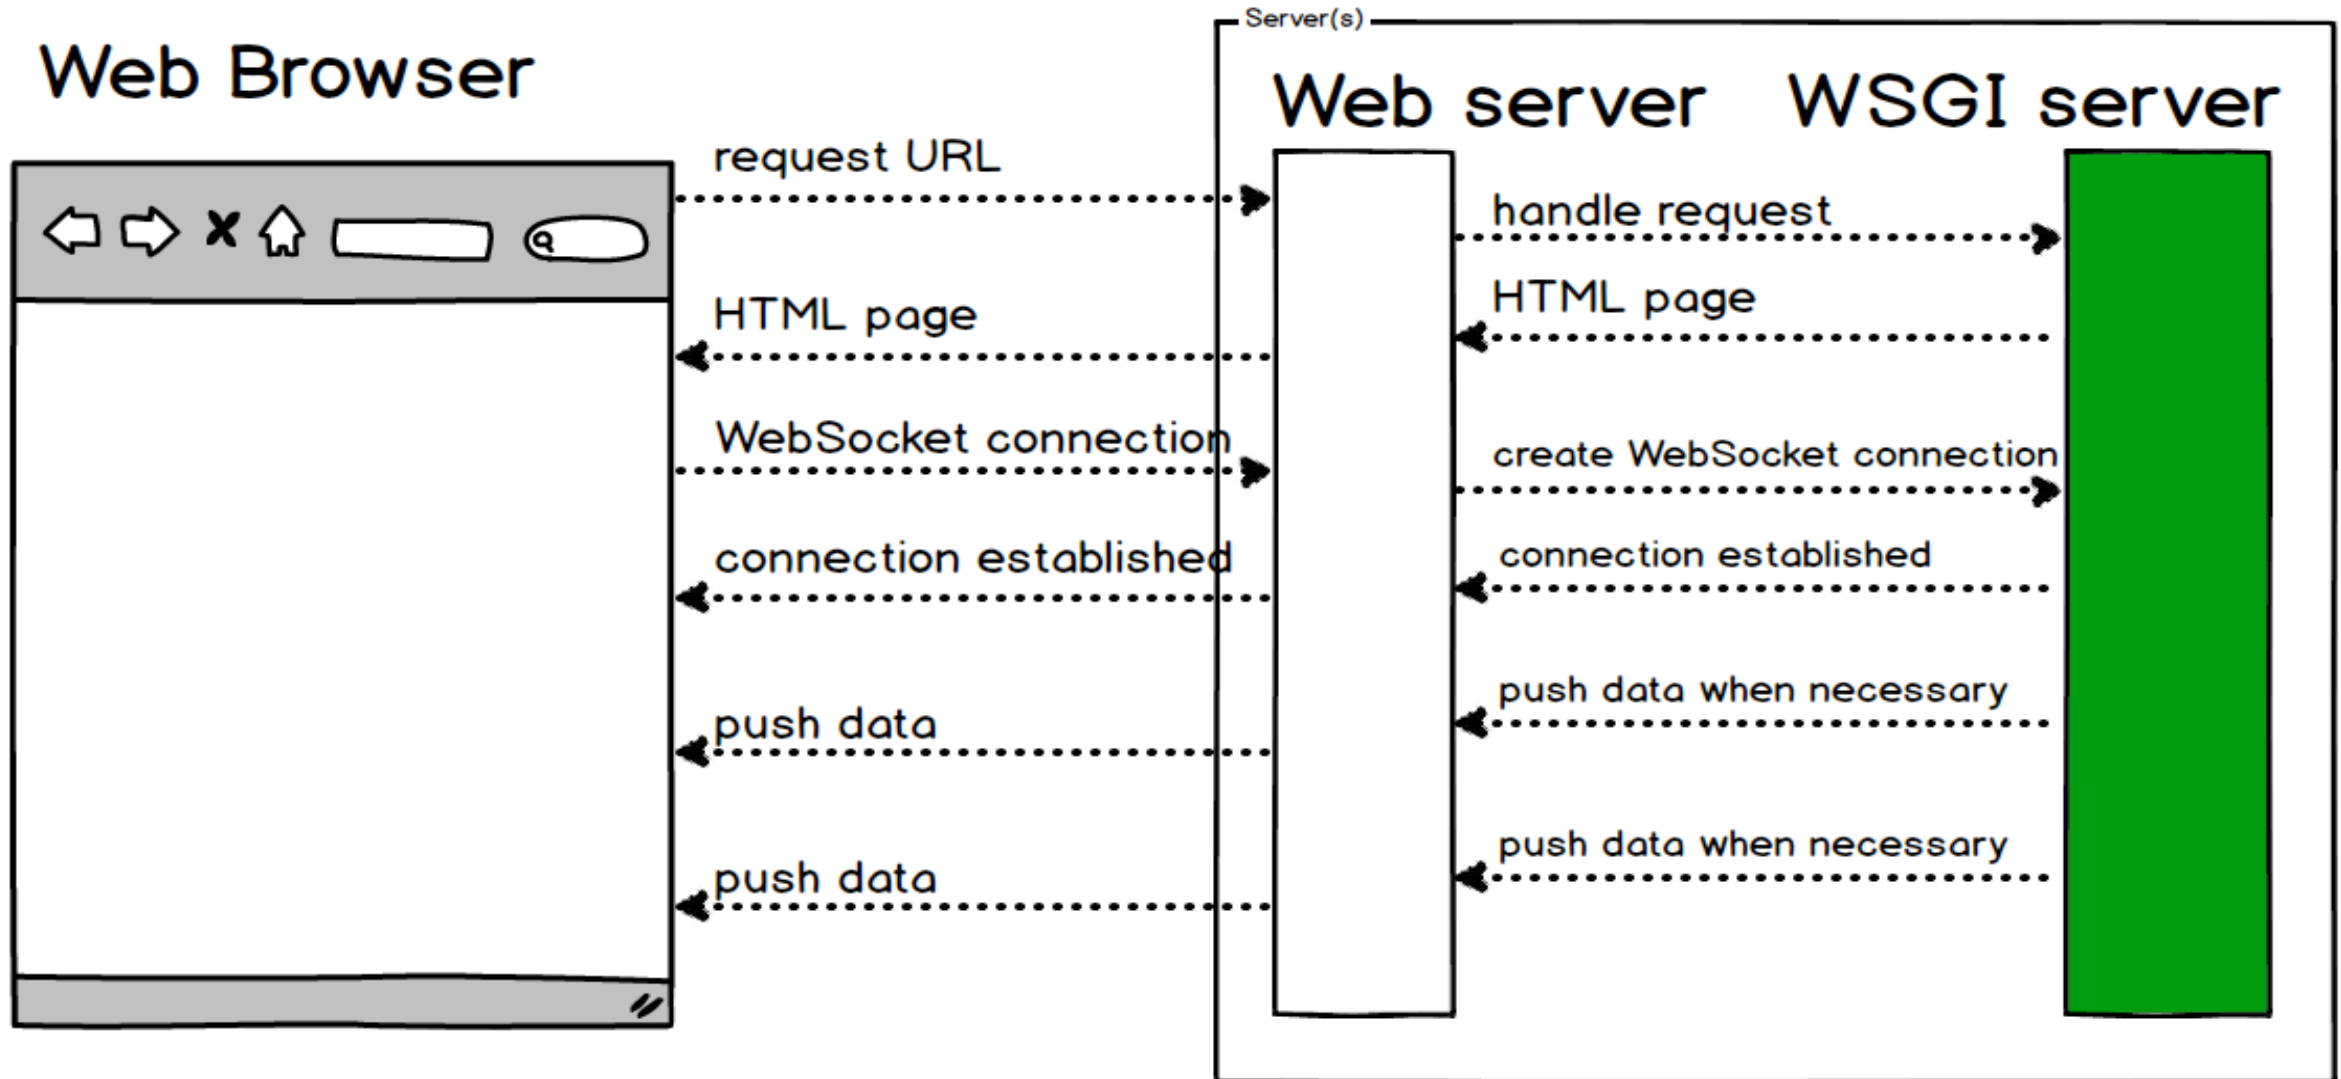

→ **Pickle**

Python objelerini serialize ve de-serialize etmek için kullanılan bir python modulüdür. Projede 'eğitilmiş makine öğrenmesi modelini' kaydetmek için kullanıldı.

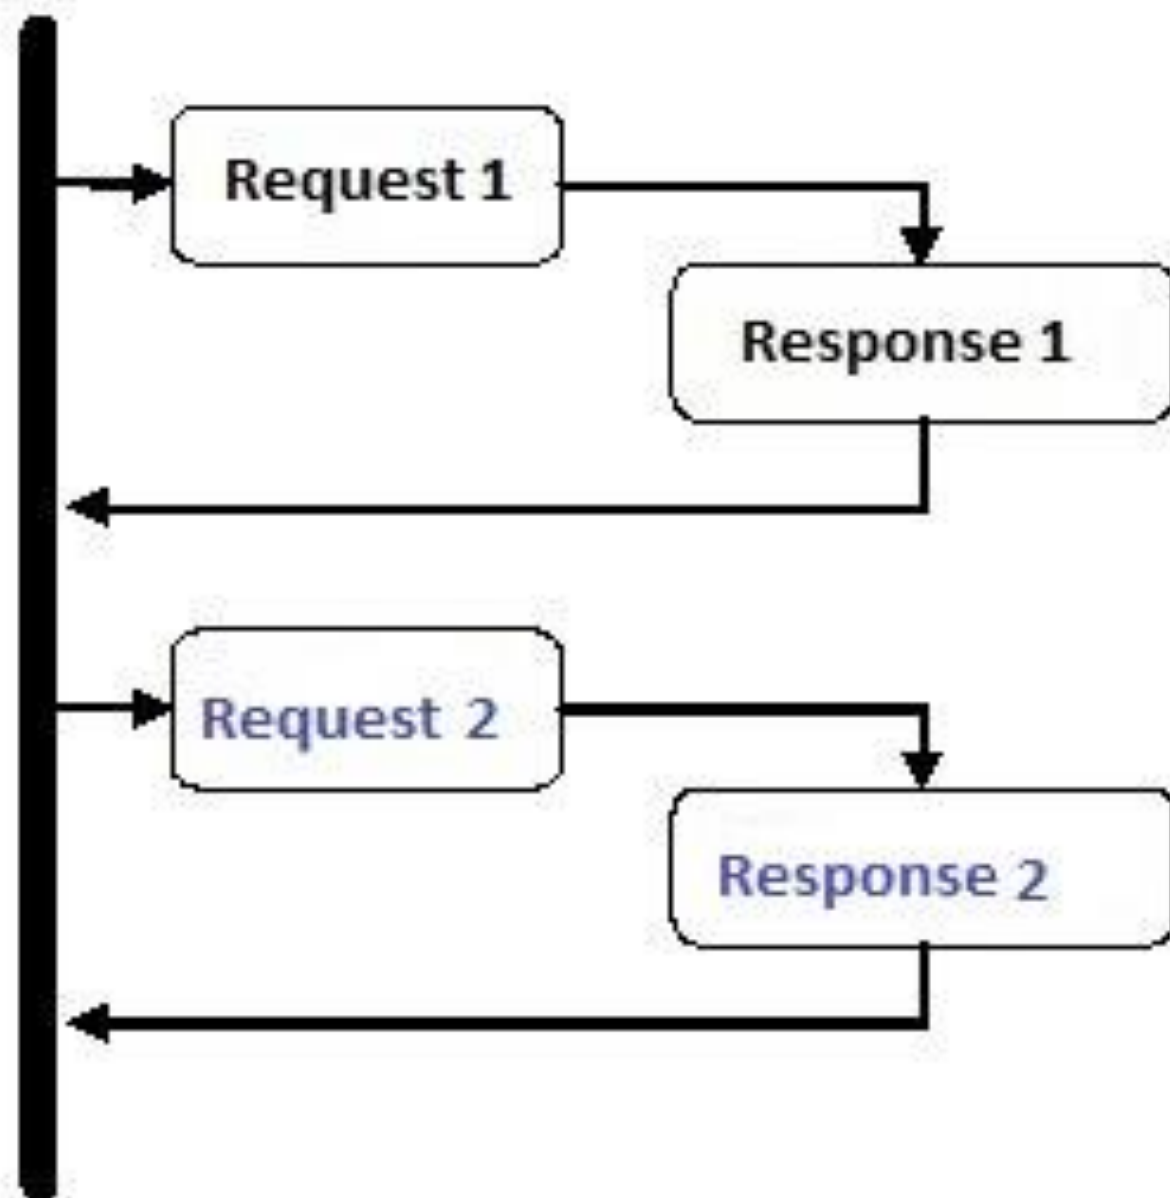

Long polling via AJAX

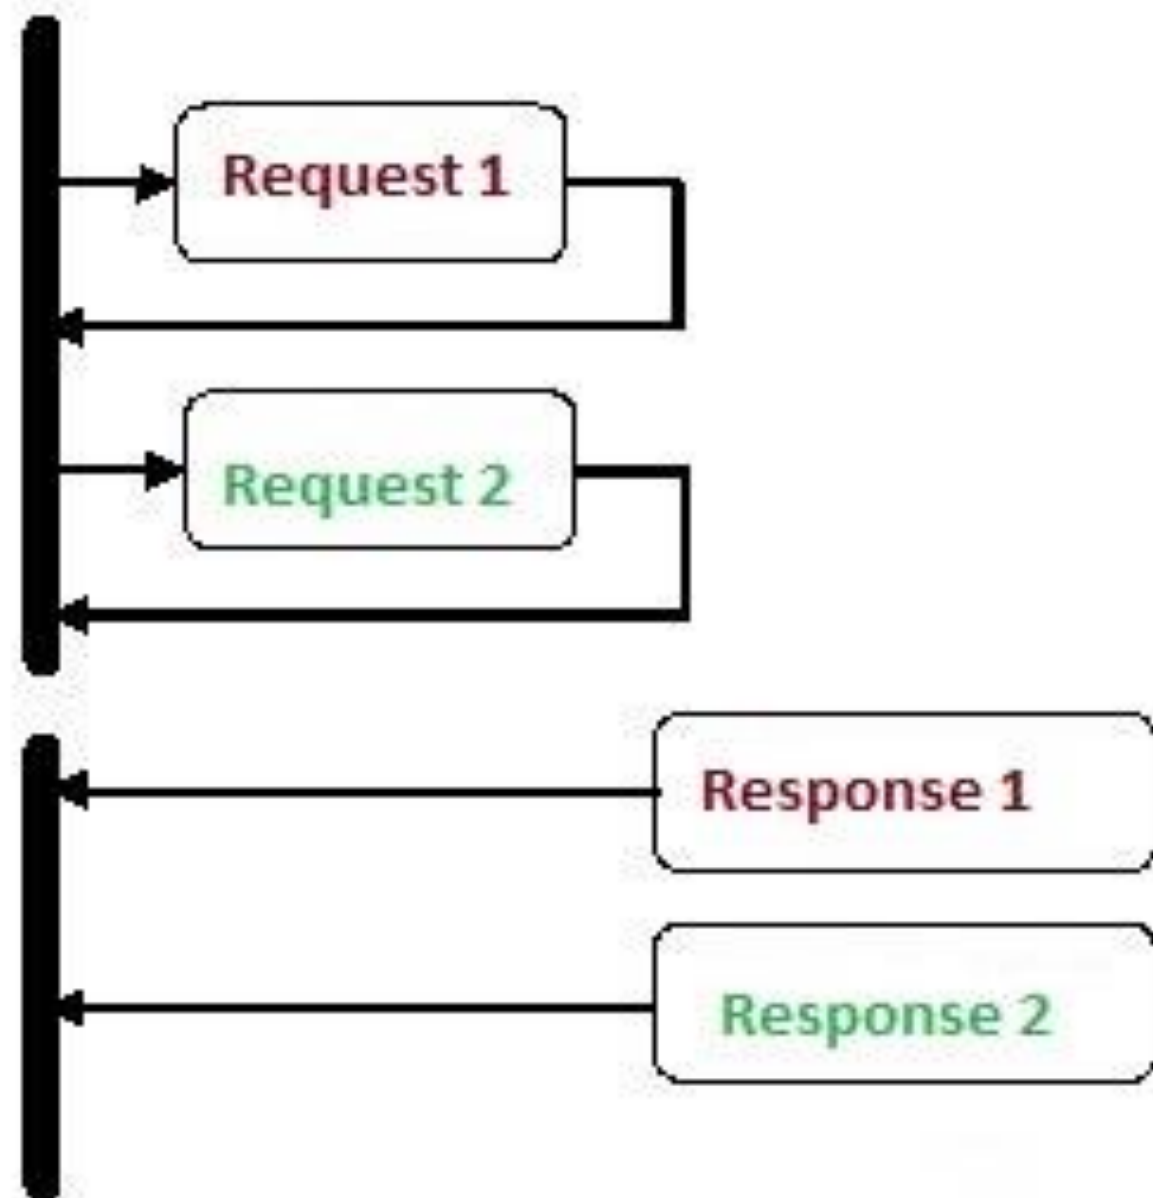

WebSockets

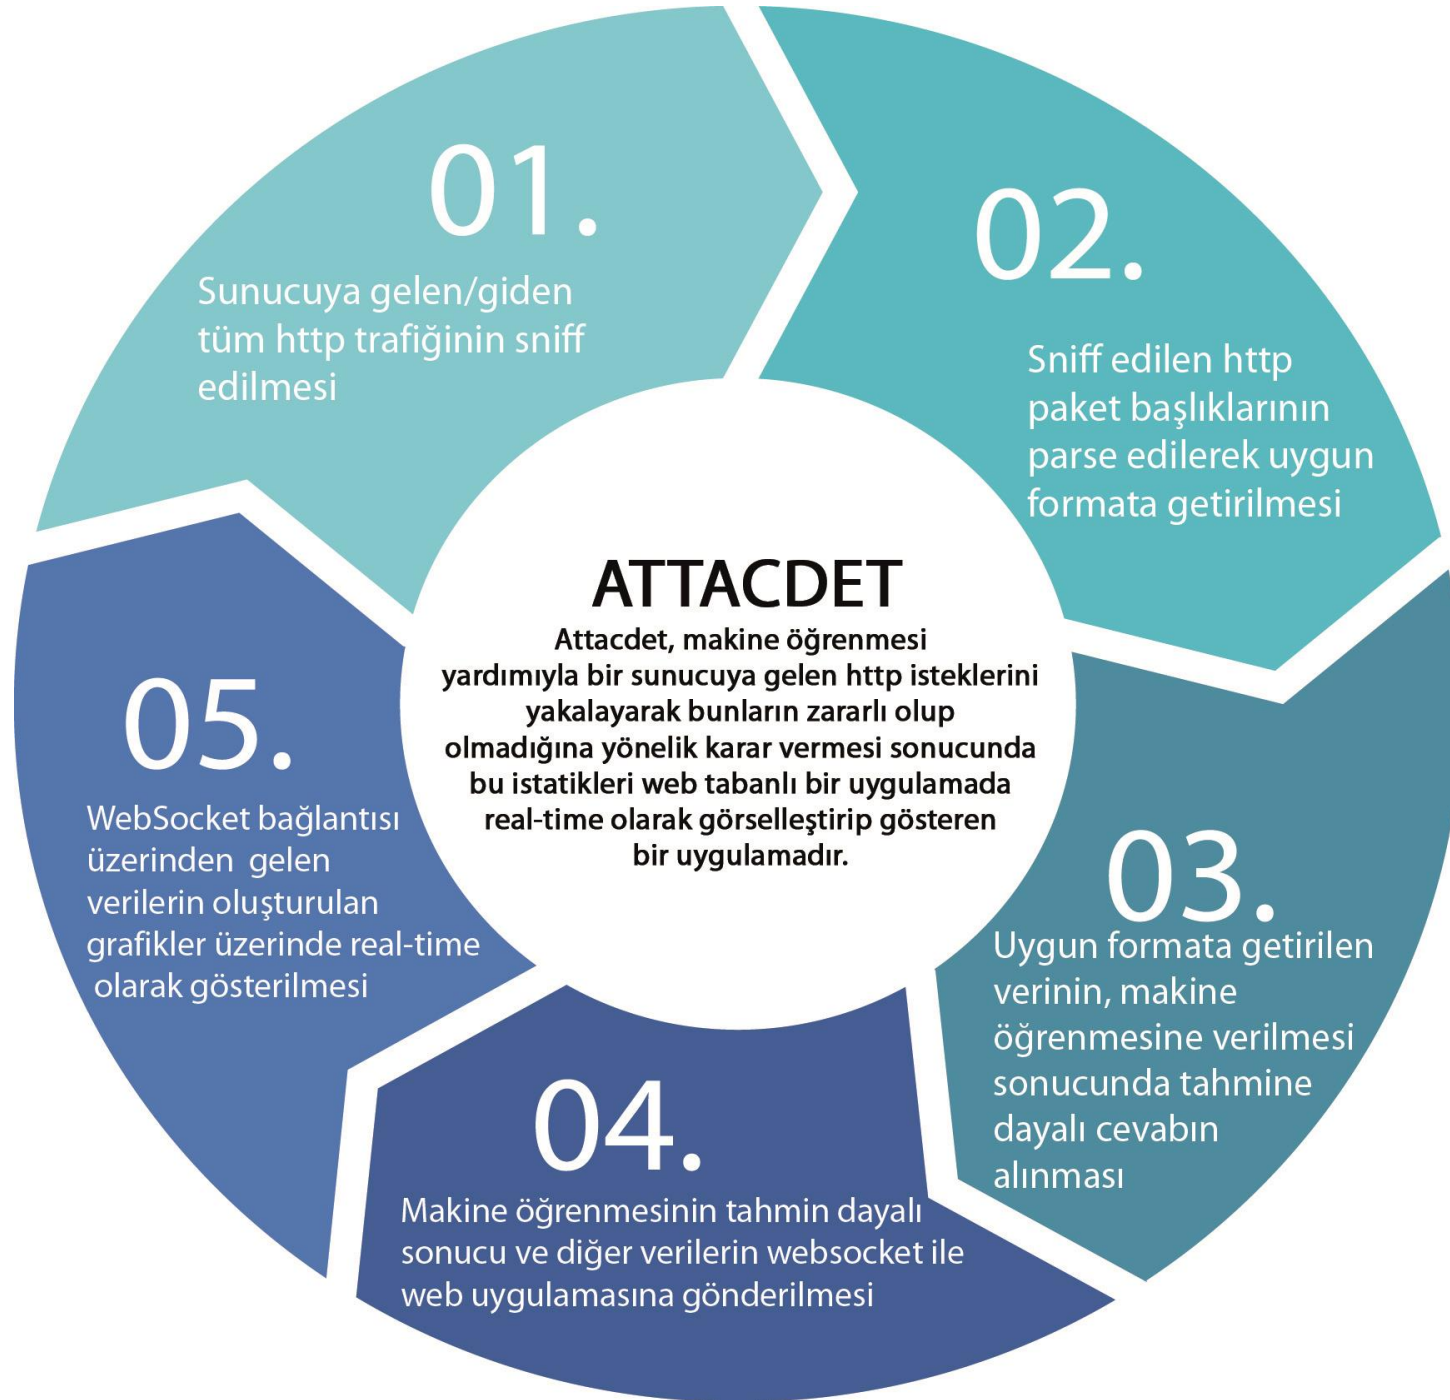

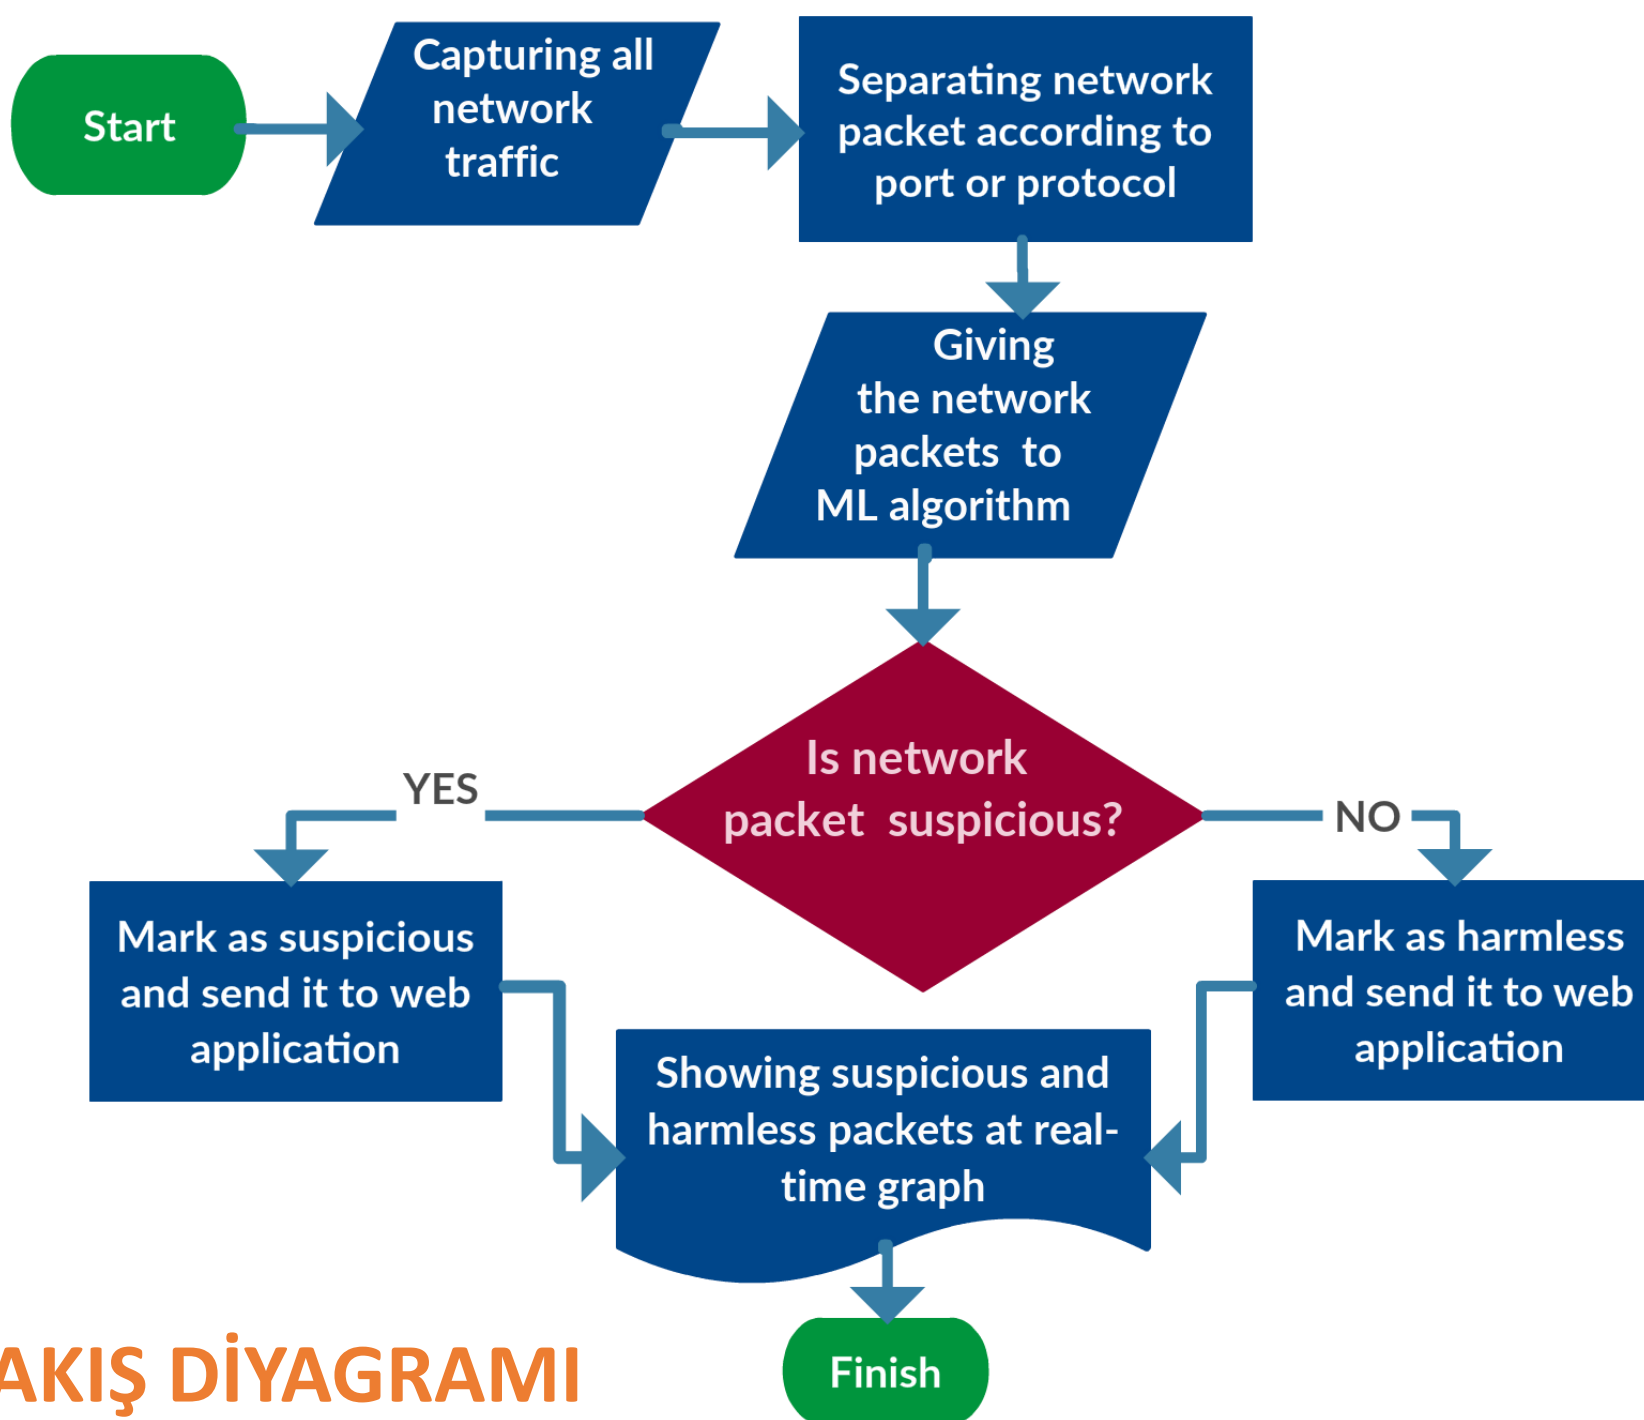

Synchronous

Asynchronous
